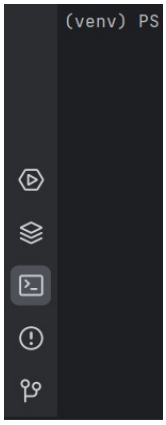
FAQs

- You are supposed to enter the correct EXPIRY. Incorrect expiry may cause errors.
- Please install python version 3.10.9:
  https://www.python.org/downloads/

- If you're using IntelliJ IDEA, make sure you install additional libraries in IntelliJ IDEA's inbuilt terminal. You can open the terminal from here, there will be icons at the bottom of the screen like this:



- Try clearing the cache in Intellij/restarting if certain scripts don't run.
- If you can't install Intellij, you can run the python scripts using command prompt (terminal). Just open the terminal from the folder where you've stored your python scripts. And run using:

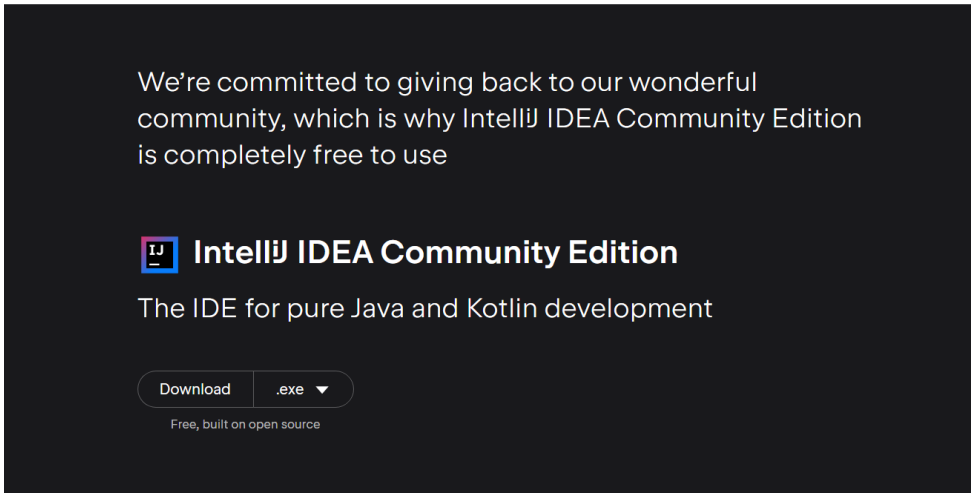
  python filename.py

  If you're on Ubuntu:

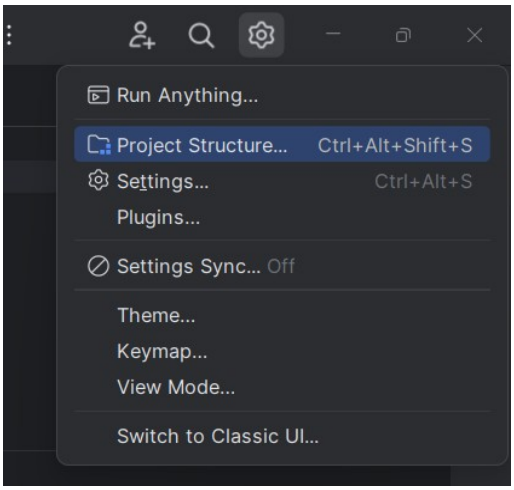
  python3 filename.py

- Make sure you install the Intellij IDEA Community Edition, NOT the Ultimate version.

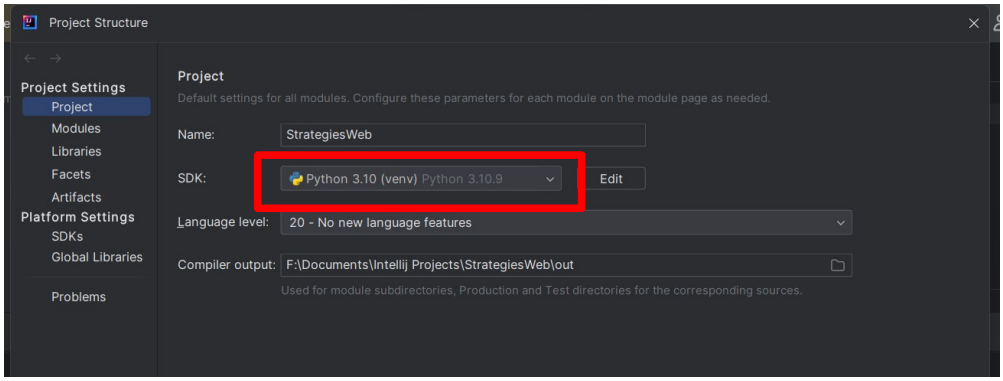
  https://www.jetbrains.com/idea/download/?section=windows

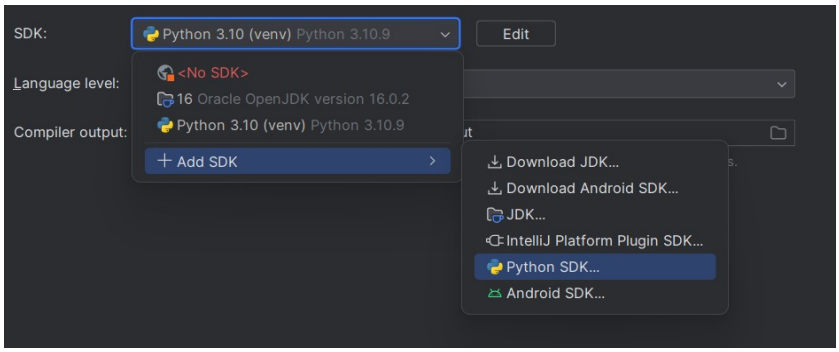


- You’ll not be able to install certain stuff on Windows 7, so it’s recommended that you use Windows 10 or later versions.
- If you’re unable to run scripts in Intellij, make sure you’ve set the SDK up properly.



Click on the settings wheel on the top left, go to “Project Structure”.



Select SDK from the SDK dropdown.


If you don’t see your python SDK, then you can install SDK from the dropdown itself:
